

Post-Treatment Precautions: Skin Booster (Rejuran, Water Glow, Juvelook, Jalupro, etc.)

- All injection treatments may cause bruising, swelling, bleeding, bumps, pain, redness, or needle marks after the procedure.
- Avoid smoking, alcohol, hot and humid environments (such as saunas), and strenuous exercise for 1–2 weeks.
- Apply regeneration cream (moisturizer) thoroughly on the treated area after the procedure.
- To prevent pigmentation, apply sunscreen regularly.
- Allow any flaking or scabs that occur after treatment to fall off naturally without force.
- For Juvelook, perform the instructed 5-5-5 massage on the treated area (excluding the nasolabial folds). Cleansing and makeup are possible immediately after treatment.
